FleetBroadband applications

The importance of being well connected

➤ FleetBroadband is the first maritime communications service to provide cost-effective broadband data and voice, simultaneously, through a compact antenna on a global basis. Three types of FleetBroadband terminal with different performance capabilities are available. FleetBroadband 150 is our new entry-level service for smaller vessels.

While setting sail on your leisure craft might be considered 'getting away from it all', you still want to know that you have the very best connectivity solution at your fingertips. Ensuring that your business runs smoothly is just as important while you're at sea as when you're on shore. The ability to be in touch 24/7 – if you need to be – is essential.

FleetBroadband is the latest-generation maritime communications service from Inmarsat. With compact and easy to install equipment, it not only looks the part, but also provides you with the performance and quality of service you demand.

Your vessel is effectively transformed into a broadband floating office, with simultaneous access to voice and high-speed data, along with fax and SMS capabilities. So while you're accessing your company network over a secure, high-speed connection, your Captain can download real-time data for vessel operations. At the same time, your guests and crew can have access to email, the internet and affordable phone calls through a variety of pre-pay and post-pay packages.

There is a range of flexible tariffs, so you're not tied into impractical long-term agreements – you only pay for being online when you're on board.

Delivered via the most advanced commercial communications satellites ever launched by the market leader in maritime communications, FleetBroadband provides you with optimal connectivity – no matter what your position or the conditions at sea.

Applications

FleetBroadband supports an extensive range of commercially available, off-the-shelf software products, as well as specialised user applications. It is ideal for a range of uses:

- Conduct your business through secure office applications: email, VPN, file transfer, telephony, VoIP and fax
- Access the internet for sports results, or book theatre tickets for your next port of call
- SMS and instant messaging
- Virtual meetings using videoconferencing
- Real-time electronic chart and weather updates
- Order supplies before you arrive at port
- Advance bookings for repairs and maintenance
- Crew and passenger communications

Key benefits

Superior performance

FleetBroadband gives you affordable, always-available access to voice and broadband data services like you're used to on shore. Its simultaneous voice and data capability means that your operational systems can be running online while you access email, the internet, and make calls – all via a single terminal.

Unrivalled reliability

We provide the most robust communications links in the business, with average network availability exceeding 99.99 per cent – so you can depend on us, whatever the weather. All of our FleetBroadband terminals are designed specifically for use in the marine environment and have been rigorously tested to our exacting standards.

Global coverage

FleetBroadband ensures you're never out of touch, wherever you sail. Voice, fax*, and data connectivity is accessible globally except for the extreme polar regions.

Total flexibility

FleetBroadband supports the latest IP services, as well as traditional circuit-switched voice and data for your legacy applications. Choose between a standard contended IP service and guaranteed data rates on demand – with the ability to select the rate according to your application**. There is a choice between three types of terminal with different performance capabilities, all using standard hardware.

Easy to install and integrate

Finding a space on your vessel for your new FleetBroadband terminal shouldn't be a problem. With the antenna set inside a neat radome cover, which ranges in diameter from 29 to 60cm, and a discreet below-deck unit, FleetBroadband is compact without compromising performance. As a standard IP service it can be seamlessly integrated with your shore-based systems, making your vessel a transparent link in your company network.

Completely secure

Inmarsat has vast experience in providing communications to international businesses, government and military customers worldwide. If required, our network can support additional security products, such as VPNs and ISDN cryptos.

More cost-effective

FleetBroadband terminals are competitively priced with a choice of airtime pricing packages to best suit your needs. The result is more affordable access to global voice and broadband data services than ever before, enabling you to achieve greater business efficiencies and reduce the cost of crew communications.

*Except for FB150

**Not available on FB150

Coverage

FleetBroadband is accessible globally except for the extreme polar regions.

I-4 Americas

I-4 EMEA

I-4 Asia-Pacific

This map depicts Inmarsat's expectations of coverage, but does not represent a guarantee of service. The availability of service at the edge of coverage areas fluctuates depending on various conditions.

How to buy FleetBroadband

FleetBroadband is available through our worldwide network of partners. Contact your existing Inmarsat service provider or visit our website to find the right partner for you.
